

About the Institution:

Santosh College of Teachers' Training and Education run by Society for Nature Education & Health (SNEH), registered in the year 2002 under Society Registration Act XXI of 1860 (Reg. NO II/1413). Santosh college of Teachers' Training and Education, approved by NCTE, and affiliated to Ranchi University for B.Ed. (2008) & affiliated to JAC for D.El.Ed. (2017) and accredited with NAAC B+ Grade. The education of the upcoming generation as teachers with the prime aim to impart a highly effective and quality education, creating a new breed of professionals equipped to face the challenges of the evolving globalization process and seize its numerous opportunities for a bright career. This college has made long strides in every sphere and has carved a special niche for itself in the field of education along with active engagement in a variety of activities such as Outreach Program, Legal Literacy and environment threatening issues. The college is committed to provide a forum to the students and faculty, not only to express their experiences and thoughts but also unfold their hidden talents. The college has well established Laboratories like Science Lab, Social Science Lab, Language Lab, Psychology Lab, Math Lab, Computer Lab, Games & Sports etc. that are needed to create an outstanding college. Presently Santosh College of Nursing, Center for Bioinformatics, College of Life Sciences, Santosh Inter College and Snehkul Public High School is functioning in this educational premise.

About the Seminar:

This seminar explores how Digital Healthcare, Climate Resilience, and Entrepreneurial Innovation can act as transformative drivers for empowering the tribal communities of India. The integration of digital technologies with indigenous knowledge systems provides powerful opportunities to improve healthcare delivery, strengthen climate adaptability, and create new avenues for sustainable livelihoods across diverse tribal regions.

For tribal populations, digital healthcare tools can enhance access to timely diagnosis, telemedicine, maternal and child health monitoring, and preventive health awareness—helping overcome geographic isolation and infrastructural limitations. Simultaneously, climate-resilient practices can protect natural resources, reduce vulnerability to environmental challenges, and support long-term sustainability. Entrepreneurial pathways—enabled by digital platforms, market linkages, and green technologies—can further enhance economic independence, innovation, and community leadership among tribal groups.

The seminar emphasizes a technology-enabled, culturally informed approach to improving health, livelihoods, and environmental resilience. It highlights how digital tools, climate strategies, and enterprise development can be harmonized with traditional wisdom and cultural identity, ensuring that progress is both sustainable and respectful of indigenous heritage.

In this context, a one-day seminar is being organized to create awareness among the younger generation, young teachers, researchers, NGOs, and community organizations working with tribal populations. The programme aims to enlighten participants about the

potential of digital health solutions, climate-resilient development models, and entrepreneurial opportunities for tribes across India. It also encourages emerging researchers to contribute innovative ideas and practical solutions that can be further developed and implemented by relevant institutions and community groups.

Broad objective of the seminar:

To raise awareness about the significance of digital healthcare, climate resilience, and entrepreneurial opportunities in empowering the tribes of India, and to promote innovative, sustainable approaches that blend indigenous knowledge with modern technology.

Theme:

- Digital Healthcare for Tribal Communities
- Climate Resilience in Tribal Regions of India
- Entrepreneurial Pathways for Tribal Populations
- Integrating Indigenous Knowledge with Modern Technology

Sub theme:

- Digital Health Access and Awareness in Tribal Communities
- Forest Product Enterprises
- Climate-Resilient Practices for Tribal Regions
- Green and Inclusive Tribal Entrepreneurship
